* For easy reference and as a guidance to our customers, we marked those Tulips and Hyacinths varieties, which we think the most suitable for forcing.

GIFT TOKENS

Bulbs make a very suitable present where other articles fail. We supply Gift Tokens to any value desired and they are in the form of an attractive card to enable recipients to select Bulbs from our Catalog to the specified value.

On receipt of remittance at our Hamilton Office the Token can be sent direct to the recipient together with a copy of our current Catalog, if so required.

South Hamilton, Mass., May 1953

*I*n presenting our 1953 catalog of bulbs for Fall planting, we take this opportunity to say 'thank you' for the ever increasing volume of business entrusted to us in the past season.

We are very grateful to be able to announce that our bulb fields and the main bulb-producing district in Holland has escaped the flood disaster that befell our native country in the February storm. We express our sincere gratitude to our American friends for the spontaneous contributions and help given.

Very many friends and clients came to see our show-garden in bloom at Hamilton this year and admired the many varieties we had planted for trial. Among them were not only the most popular ones, but also a great many of the newer varieties.

At the time of going to press with this catalog, we are glad to say our stocks of various bulbs look particularly promising and under normal weather conditions we expect to harvest a very fine crop of superior bulbs.

In this catalog we have added several new introductions and have deleted some of the older varieties that have been superseded, whilst we hope the somewhat different lay-out of this catalog is appreciated.

We have added to our office and warehousing here at Hamilton, so that we may handle your order intelligently. Please co-operate and mail your order early in the season.

GOLD MEDAL TULIPS

We make a great Speciality of Tulips

Tulips belong to the most beautiful of Spring Flowers. Graceful and of impressive beauty they provide a brilliant color display in the garden for at least two months in succession. Tulips are of easy culture as they are quite hardy and free flowering in either a sunny or shady situation.

A careful selection of varieties is advised to ensure a continuous flowering period. **Kaufmanniana** Tulips and other **Rare Tulip Species** bring a gay color riot in the Rockery or border when **Narcissi** are almost over. Early in April, the **Single Early** Tulips are in bloom, celebrating with fine colors the arrival of a new season. A little later the **Early Double** Tulips attract the attention with their colorful and peony-like flowers. **Mendel** and **Triumph** Tulips with their long stems, vigorous habit and wonderful shades are the finishing touch of April. In a wide range of shades, self-colors and bi-colors, they give brilliancy to the Garden when flowers are needed to bridge the interval until May.

All through May, **Darwin**, **Cottage**, **Lily-Flowering**, **Parrot**, **Breeder** and **Double Late** Tulips are in bloom at almost the same time or in this succession. They give a parade of brilliant colors from pure white to almost black, from softest pink to deepest purple, all on splendid stems and with great alterations in form.

All Tulips are extremely useful for the garden and bring gaiety, pleasure and satisfaction.

Collections of Tulips: Of all different sections of Tulips, we offer in this catalog very fine Collections which are carefully chosen and assembled to give entire satisfaction in your garden, border or for plantings anywhere around your home. The easiest to grow, distinct and dependable varieties are selected to produce a harmonious display of balanced beauty in a full range of colors.

Each variety is separately packaged and correctly labelled. All bulbs are choice selected varieties of top size.

Anyone not familiar with names of Tulips may order de Jager's Collections with every confidence and which are offered at a pretty saving too.

Outdoor Planting: Plant Tulips in groups of 6 or 12 to make a good display in the border or bed, 6 in. apart and 4 in. deep. They can be planted in Autumn until severe frosts set in. Tulips thrive well in any type of soil but if heavy, add some sand. Well cultivated and well drained soil is important. Dig soil before planting and do not have Tulips in the same location some years in succession, unless the soil has been removed and replaced with fresh at a depth of at least one foot. Inattention to this matter is often the cause of failure with Tulips. It is advised never to allow any part of the dead foliage or flower to drop on the ground. These parts carry diseases and infect the soil. Only use well decayed and old manure.

For Forcing: Early Tulips (single and double) including Mendel Tulips are suitable for earliest forcing, while Darwin and Triumph Tulips are for late forcing. After planting and plunging the Tulips it will take at least 10–12 weeks, before the shoots and sprouts are high enough that they may be brought into a dark room at a temperature of 55–60° F. to allow the stems to lengthen. After 10 days to two weeks the Tulips can be removed into a light warm room. For a few days, the bulbs should be covered with some paper before exposing to the full light. Tulips should never be hurried and bottom heat and draught should be avoided. Generally speaking, Amateurs should never bring in the bulbs, until the shoots are 3 to 4 in. high and after the middle of January.

Origin: The first time Tulips were ever mentioned, was in 1554, when Busbequis found a few specimen near Constantinople. Six years later, Carolus Clusius brought some of these Tulips to Holland and in 1601 he described 19 varieties in full detail and added 5 pictures. Dodonaeus wrote about Tulips in his *Kruydtboek* in 1618 and made three different sections. Most of the Tulips had broken colors and this was considered very fashionable. In 1634–1637, during the Tulip-mania, fantastic prices were paid for bulbs, e.g. 1 *Semper Augustus* \$ 2200.—., weight 200 aces, The bulbs were sold per 'ace', one ounce is 5900 aces, and a good tulip bulb weights now 7000 aces.

Breeder Tulips

(May-flowering)

These majestic Tulips have gained important prominence in the gardens of real amateurs, as they produce a most artistic effect by their refined flowers, which are held on heavy upright stems. Their fascinating colors are rich shades and tints in glorious autumnal purple and gold, and bronze orange, yellowish, soft copper and combinations of such colors. These colors which rival the glorious rich tints of Indian Summer, are not to be found in other May-flowering Tulips, and on account of their enormous size and vigorous growth, yet perfect in form and proportion, Breeder Tulips are a wonderful addition to the garden.

Cottage and Hybrid Tulips

(All May-flowering)

• Cottage Tulips are so named because they have mostly been found in old Cottage Gardens of Great Britain and France, where they have been growing for a great number of years. They are distinct in habit, embrace many beautiful colors, and are excellent for borders, where they should be freely planted in large clumps or masses. They may also be naturalized in grass, wild Gardens, etc. where they present a gorgeous display during the month of May.

Triumph Tulips

(Mid-Season)

A race of Tulips with most outstanding characteristics and merits. They are exceedingly valuable for the Flower-Garden, in borders etc. on account of their strong tall stems and vigorous habit. Most pleasing shades of the self-colors, bi-colors, edges, flushes, stripes and margins, which will not be found in other types of Tulips and this stresses the beauty of this section. Triumph Tulips flower immediately after the Mendel Tulips and are a valuable addition to obtain a continuous color display of Tulips. Some varieties will force steadily, but the substance and the size of the flowers are superior.

Origin: This group is a result of hybridising Single Early Tulips with Darwin, Breeder or Cottage Tulips. The first introductions came from Messrs. Zocher & Co, at Haarlem in 1918. Five years later, they were officially registered as Triumph Tulips.

COLLECTIONS OF TRIUMPH TULIPS

Mendel Tulips

(Mid-Season)

This type owes its particular value to the fact that it has contracted the glorious colors and the astounding value for the garden of the Darwin Tulips and the earliness of Duc van Tholl. They are of excellent habit and beauty and flower in the garden 10 to 14 days earlier than Darwins, thus bridging the interval between Single Early and Triumph Tulips. Most varieties can be forced quite easily, early and in a short time and this adds considerably to their value. In the description of each variety, the approximate forcing date is mentioned.

Origin: The name of this race was given to a group of varieties obtained from cross-pollination between Duc van Tholl and Darwin Tulips by Messrs. E. H. Krelage & Son of Haarlem, Holland. These seedlings flowered for the first time in 1915 and were introduced at Haarlem in 1921. They caused a real sensation and fancy prices were paid for the stocks.

Forcing: They may at once be exposed to the full light contrary to all other Tulips which should be started in the dark. If for some unforeseen reason the height is not obtained and the bulbs are found to be lazy, they should be left in the dark for a few days and thus encourage the sprouts to lengthen. See information on page 2.

COLLECTIONS OF MENDEL TULIPS

These collections of Mendel Tulips are made of such varieties that are particularly suitable for pot and bowl culture for flowering in the later part of January. They are, of course, also suitable for planting outdoors.

Fascinating Parrot Tulips

(May-flowering)

These artistically shaped flowers with their heavily laciniated petals have no rivals for exquisite effect. The gorgeous flowers are large and strikingly beautiful, they are very effective and picturesque for the garden for their rich brilliancy and fine for table decoration and bouquets in vases. A mixed bunch of Parrot Tulips create a fascinating and artistic effect, they last well in water.

Origin: All the Parrot Tulips are sports of Tulips from various sections and with the exception of their laciniated segments, they have more or less the same qualities as their originators. It is known that of the old varieties Lutea major and Markgraaf van Baden were in existence in 1680, with these and some other old varieties, they are still grown. New Parrot Tulips are all strong, tall and dependable in blooming, whereas the old varieties are shy bloomers with weak stems.

COLLECTIONS OF NEW PARROT TULIPS

The varieties of these collections are outstanding in beauty and fascination, in full color harmony and suitable for garden and cutting purposes.

Early Double Tulips

Double flowering Tulips are of fairly robust growth and have massive flowers, in many cases they are as large as small Peonies, and last somewhat longer than Single Tulips. The Double Tulips are not so elegantly formed as Single Tulips, nevertheless they are exceedingly useful and effective for bedding purposes. Most of the Double varieties are excellent forcers and make fine displays when grown in pots, pans, boxes, etc., they should, however, be forced slowly.

We include in our collections of Early Double Tulips five beautiful different colored varieties of the same habit and height, which we can recommend with every confidence.

Bybloemen withdrawn for 1953 season.

Fosteriana Species & Hybrids

Is it not somewhat remarkable to think that after more than three centuries of careful cultivation and hybridising, Western Europe has not been able to produce anything to match in size and brilliancy of color with these Bokhara Tulips growing wild on the mountain slopes of the Asiatic desert. We may, however, predict that by the influence of *Tulipa Fosteriana* in course of time an extremely large new strain of Tulips will be produced that will stand out in size and color such as *Tulipa Fosteriana* Red Emperor (Mad. Lefeber), Holland's Glory etc.

Fosteriana Agamemnon (20), large scarlet flowers of huge size opening quite flat, base orange and black, tall.

\$ 1.70 per doz.; \$ 12.00 per 100

Fosteriana Agina (11), an attractive form of dwarf habit, vermilion-scarlet flowers.

\$ 1.70 per doz.; \$ 12.00 per 100

Fosteriana Cantata (12), this is an outstanding novelty with handsome vermilion-red flowers forming a vivid contrast to the shiny green foliage.

\$ 2.00 per doz.; \$ 14.00 per 100

Fosteriana Defiance (20), vermilion-scarlet with finely formed rounded petals, conspicuous yellow base.

\$ 2.30 per doz.; \$ 16.00 per 100

Fosteriana Flaming Youth (18), a lovely Tulip producing huge scarlet flowers of a remarkably vivid hue.

\$ 2.30 per doz.; \$ 16.00 per 100

Fosteriana Fochtelo (10), an extremely beautiful species of a uniform scarlet-orange color, this fine oriental variety may be successfully planted in the border, where it provides a very bright and attractive picture, one of the first of this group to flower.

\$ 1.70 per doz.; \$ 12.00 per 100

- Fosteriana Osiris**, A.M., Haarlem 1939, this really outstanding variety produces on very thick stems, flowers of a glowing light scarlet, with large golden-yellow base, a much stronger and larger plant as Red Emperor. \$ 3.50 per doz.; \$ 24.00 per 100

Lefeber)** (22), F.C.C., Haarlem 1932, positively the most beautiful Tulip under cultivation to be sure, it produces colossal blooms on erect strong stems, color is fascinating and is of the loveliest shade of glowing scarlet imaginable, base yellowish. Very sturdy grower, strongly recommended. \$ 2.00 per doz.; \$ 14.00 per 100
- Fosteriana Rockery Beauty** (8), from this splendid race of Tulips a very dwarf sport has been selected of which the large flowers are of a dazzling orange-scarlet color and of particularly beautiful habit, a treasure to have in the rockgarden. \$ 1.70 per doz.; \$ 12.00 per 100
- Feu Superbe (Hybrid)** (18), most fascinating color, bright oriental red, an exceptionally well-formed flower of grand quality and smooth texture, borne on a sturdy stem, a very ornamental plant in the rock-garden with great lasting qualities. \$ 1.00 per 3; \$ 3.75 per doz.
- Purissima (Hybrid)** (20), a most outstanding novelty, one of the marvels of this unique race, the color is milky white and the only white one, ever been raised in this section, very remarkable large flower, long lasting and constantly fresh looking, its effect is of delicate loveliness. 80 cts. each; \$ 8.00 per doz.
- Red Riband (Hybrid)** (18), a gorgeous variety with brilliant red color, bright yellow on the base, black edged, a very handsome flower of enormous substance, borne on a rigid stem, a very showy garden Tulip, flowering in the second half of April. \$ 1.00 per 3; \$ 3.75 per doz.

Kaufmanniana Species & Hybrids

(Waterlily Tulips)

This is one of the most remarkable group of Hybrids of recent introduction from the beautiful *Tulipa Kaufmanniana*. They flower far ahead of other Tulips on short stems, they establish themselves easily, coming up freely year after year without any care. Most of them have mottled, striped, or spotted foliage like *Greigii*, which is a beautiful and interesting characteristic on its own. We very strongly recommend them for the rock-garden, border and other places where they can be left undisturbed.

- Kaufmanniana (Waterlily Tulip)**, (Central Asia) (6), a charming species, producing in March large flowers of elegant form and remarkable beauty, opening out to a great size in the sun; color soft creamy-white, centre slightly marked with carmine-red, strongly recommended for planting in groups in borders and in rock-gardens, they may be left undisturbed and will flower for many years. \$ 2.00 per doz.; \$ 14.00 per 100

Rare Tulip Species

(Botanical Tulips)

Some of the Tulip Species are very scarce, therefore please order early to ensure delivery. A large number of the dainty and small species like Linifolia, Batalini, Eichleri, etc., are especially recommended for the rock-garden, where the little groups of flowers are best seen to advantage. The large and more sturdy growers such as the Fosteriana's, Kaufmanniana's (listed under separate groups), and Cornuta Stenopetala (acuminata) with its wired horned petals are unequaled in a rich herbaceous border, where they multiply manyfold its excitement and glory in springtime.

COLLECTIONS OF RARE TULIP SPECIES

As in all our collections of bulbs offered in this catalog, the collections of Rare Tulip Species are made up very carefully, containing the best and most interesting for the rock-garden and other choice places.

25 Bulbs, 5 each of 5 varieties, our selection.	\$ 2.75

Daffodils and Narcissi

The beauty of Daffodils and Narcissi is unquestioned and these flowers now form a leading feature in almost every Spring garden. Every Gardener should realize the enormous amount of intense pleasure that can so easily be obtained from the cultivation of a batch of Daffodils or Narcissi.

Indication and origin of the name Daffodil and Narcissus. The use of the terms Narcissus and Daffodils is being confused a great many times. There is a tendency to apply "Daffodil" to varieties of which the trumpet or cup is as large or larger than the perianth, while the name Narcissus indicates varieties having small cups. The term Narcissus however, is correct for all different types of Daffodils and Narcissi.

The name Daffodil is from an interesting origin. In the fifteenth century, the words affadile and affodylle applied for asphodel, a Narcissus with a large cup. In 1538, Turner writes about affadyll and daffadilly. Ten years later he says in his "Names of Herbes" that an English whyte affodil is a Duche Daffodil. He uses the forms affodil and daffodil in 1551. The name Daffodil was then used by Gerarde, when he used this term in his Herbal.

Other forms of Daffodil have been: aphrodillus, affodillus, daffodilly, daffadyl affodyll, daffodyll, pseudo-narcissus and bastarde-narcissus.

The origin of the term Narcissus has not been connected with so much variance. It is accepted that the name has been deduced from the Greek verb Narkao, (lat. obtorpesco), which means to narcotize, as the flower was considered to do so. There is also a Greek mythe that accounts for the name, in which Narkissos is the chief character.

Naturalizing Daffodils and Narcissi in Grass etc. All Daffodils and Narcissi are suitable for naturalizing but in very heavy soils, preference should be given to stronger growing sorts i.e. Trumpet varieties and many Large Cupped sorts. They are all admirably adapted for grassy slopes and banks, where they should be freely planted. A splendid effect is obtained when Trumpet and other varieties are grouped separately, scattered on the ground and planted where they fall.

Soil and its Treatment. Daffodils and Narcissi will thrive in any well cultivated and drained garden soil. In preparing the ground for planting, dig deeply and if well rotted stable or cow manure is available this may advantageously be dug in 18 to 20 inches deep so as not to come into immediate contact with the bulbs. Never use fresh manure of any kind at planting time. On poor and dry sandy soils we recommend a dressing of sulphate of potash at a rate of about 1 oz. per square yard to be sprinkled over the surface of the ground after planting.

Growing Daffodils in the greenhouse or indoors. All types of Daffodils and Narcissi are suitable for this purpose. Pot up the bulbs on arrival and if ordinary pots are used take a good loamy soil, adding sufficient sand and peat to keep the mixture open. A light dusting of bone meal is also useful. Pot firmly in well crocked pots. For bowls without drainage holes use a good fibre. Plunge the pots and/or bowls in the coolest place of your garden and in the absence of garden space the pots may be placed in a cool airy cellar (35-40° F.) where watering from time to time is necessary. When the shoots are about 4 inches long and the flower buds well out of the neck of the bulbs, the pots may be removed into a warm room. Heat should be gradually increased from 50° to max. 60° F.

It is advisable to remove the foliage of the sideshoots, if these do not show a flower bud. Just before the buds are open, water can be spread lightly, when they are in bloom, less water should be applied.

Revision of the Classification of Daffodils. In this catalog we have adopted the revised system for the new R.H.S. classification of Daffodils and Narcissi formally approved by the General Bulb Growers Society of Haarlem (Holland) and the Daffodil Societies of America, Canada, Australia, Tasmania and New Zealand.

The principal changes on comparing the old system with the new one are as follows:

The former Leedsii, Incomparabilis and Barrii Divisions are transferred into two Divisions: viz. Division II Large-Cupped Narcissi with its sub-divisions a, b, c, d and Division III Small-Cupped Narcissi with its sub-divisions a, b, c and d.

The whole Genus is now classified in eleven Divisions as follows:

Ia. Yellow Trumpets - Ib. Bicolor Trumpets - Ic. White Trumpets - IIa. Large-Cupped, yellow perianth, colored cup or corona - IIb. Large-Cupped, white perianth, colored cup or corona - IIc. Large-Cupped, white perianth, white cup or corona - IId. Large-Cupped, nog falling in a, b, or c. - IIIa. Small-Cupped, yellow perianth, colored cup or corona - IIIb. Small-Cupped, white perianth, colored cup or corona - IIIc. Small-Cupped, white perianth, white cup or corona - IIId. Small-Cupped, not falling in a, b, or c - IV. Double varieties - V. Triandrus Narcissi - VI. Cyclamineus Narcissi - VII. Jonquilla Narcissi - VIII. Tazetta Hybrids (Poetaz etc.) - IX. Poeticus Narcissi - X. Species and Wild forms and Hybrids - XI. Miscellaneous Narcissi not falling into any of the foregoing Divisions.

New and Rare Daffodils

We offer the following list of very choice and rare Daffodils and Narcissi, which should be of special interest to the real Connoisseurs and Fanciers. The Bulbs offered are tall top sized and orders should reach us as early as possible, not later than the 15th of September, after which date we replant our stock. The earlier these Bulbs are planted the better it is, while this importance is of equal interest to Purchasers.

- Amateur** (Small-Cupped 3b), A.M., Haarlem 1943, a splendid flower with immense thick very broad snow-white perianth and a flat expanding orange crown, the perfect balance of the flower makes it very attractive, strong grower. **60 cts. each; \$ 6.00 per doz.**

Hyacinths

The best handpicked quality, choice bulbs selected from healthy stocks, adopted for Bowls, Pots, Glasses and for Exhibition. We include only valuable varieties in our Collections.

CULTURE IN POTS

Hyacinths should be potted early in September for Christmas flowering and every fortnight after for succession.

After three or four months, remove to the forcing house as required, but care should always be taken that the bulbs are well rooted and the buds well out of the neck of the bulbs before beginning to force, as successful cultivation depends almost completely on these points. To keep the foliage dwarf and to assist the perfect coloring of the flowers, when growing, they should have occasionally a supply of liquid manure. Always use clean old pots or pans.

HYACINTHS ON GLASSES

Fill the glass with water (rainwater preferred) so as almost to touch the base of the bulbs, a few pieces of charcoal should be put in the glass, as this is of service in keeping the water pure. The next proceeding is the simple one of place the glasses in any dark cool room, cellar or cupboard, until the sprouts are about 3 inch. high, then they may be brought gradually to the full light. Although this system of culture is very simple, it is of the first importance that suitable bulbs should be obtained.

OUTDOOR CULTURE

For successful cultivation in the open air, Hyacinths may be planted any time from September to December. September and October being the best months; they like a light rich soil, the ground should be sufficiently drained to prevent it becoming too retentive of moisture; plant the bulbs at equal distances apart in circles or straight lines and about 5 inches deep. Never plant the bulbs when the ground is wet. They require a little covering of straw or a thin layer of leaves during the winter to protect them from frost.

Those marked * are easy forcing varieties and especially suitable for indoor culture.

Large Dutch Crocus

When planted two or three inches apart in squares, the many flowers each bulb produces, will thickly cover the whole plot. In lawns and pleasure parks, planted in grass, they are extremely effective. They are also very fine for forcing but should be forced slowly in an airy situation. Crocuses should not be planted too deeply but only covered. We have discarded a great many varieties in favor of better ones.

COLLECTIONS OF CROCUS

Something very outstanding to have in bloom in pots during winter, is a collection of our choice large flowered Crocus. Plant thickly in pots immediately on receipt and plunge the pots in peat fibre or ashes. Crocuses cannot stand artificial heat and should be grown as cool as possible and given water freely when removed from the plunging bed. If the temperature is too high they will go blind. These collections can, of course, also be used for more liberal plantings in the garden.

WINTER-FLOWERING CROCUS SPECIES

There are no bulbs that give more pleasure in the garden as these Crocus-species and a rockery may be made more attractive, not only because of the greater variety, but also by reason of the succession of flowers produced by the various species. We strongly recommend them for a trial, if you are not already acquainted with them. They ought to be much more extensively cultivated on account of their unsurpassed decorative beauty. Plant 3 to 4 inches deep.

Hardy Cyclamen

The hardy species of Cyclamen are very interesting and pretty bulbous plants that will grow freely in short grass beneath trees, on half-shaded rock-work and as clumps in flower borders of a dry description. They prefer well-drained sites and thrive so much better, if a little lime rubble is well incorporated with the staple soil. They are of dwarf habit, have lovely foliage and produce a charming effect.

Hyacinthus Amethystinus coerulea, lovely amethyst-blue. 45 cts. per doz. \$ 3.00 per 100

Hyacinthus, other varieties see Muscari.

Irises (Bulbous Rooted)

It would be difficult to name any other hardy bulbs that repay the trouble of cultivation better than the Iris. Their blossoms compete in richness and variety of colors with the choicest and most beautiful Orchids. They are most easy to cultivate and succeed splendidly in almost any soil. For Vases and Bouquets the flowers are greatly praised, as they last very long when cut and the buds open well in water.

Lily-of-the-valley (Convallaria)

(German grown pips)

Outdoor Culture: The Lily-of-the-valley is primarily a shade plant. It can be made to grow in the open, will do fairly well in ground shaded for part of the day, but luxuriates best in places under the shade of trees. The pips should be planted 3 to 4 inches apart and about 1 1/2 in. deep in good rich garden soil. Such a bed, top-dressed in the late fall with well-rotted manure will do very well.

Indoor Culture: To grow Lily-of-the-valley successfully indoors, they should be planted in pots or boxes, about 1 in. apart, leaving the crown exposed above the soil, do not press the soil too tight between and about the roots. To start off they like a bottom-heat of 65°-75° and the soil should be kept moist. Keep the crowns shaded from the light, until the spikes are 5-6 in. high, when they can be placed in full light (never direct sun-light).

Double Peonies

HOLLAND GROWN STURDY YOUNG ROOTS WITH 3 TO 5 EYES

Ready for shipment in September

Culture: Peonies should be set so that the buds are definitely not below two or three inches under surface of soil. New plants should never be set in ground from which established peony clumps have been recently removed. The Peony likes rich ground, but the roots must not be placed in contact with manure. Some protection from sunlight helps the flowers to retain the full delicacy of their coloring, which fades out in full sunlight. On the other hand, the peony detests having its ground invaded by tree roots.

Sparaxis

Lovely bulbous plants of the same habit as *Ixias*. The flowers are even larger in size and produce a combination of colors rarely seen in any other race of bulbs or plants. They deserve to be cultivated more extensively. Very useful for pots, rock- and Alpine garden etc.

Beautiful Mixture. (See illustration).

Sternbergia (Autumn-flowering)

Bulbs are not available after September 1st.

Sternbergia lutea, producing an abundance of Crocus-like flowers in fall, color rich golden yellow. It thrives well and happily in a good drained position with a southern aspect, where they may be left undisturbed for years. Plant bulbs 8 to 10 inches deep. In cold districts they should be protected against severe frost. They may also be grown in pots or bowls to flower a few weeks after planting.
\$ 1.30 per doz.; \$ 9.00 per 100
